

Oil Mist Solution

ACTIVE FILTRATION line of filtration equipment

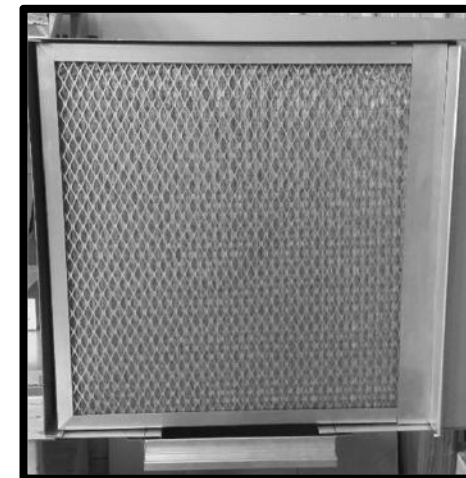

a product by Elite Manufacturing Specialists

Active Filtration units can be fitted with oil mist pre-filters to remove oil mist from the air. These oil mist filters have a stainless steel screen and galvanized housing for many years of use.

The oil mist filters are added before the standard pre-filters so the units maintain their MERV rating.

For very light mist environments, the filters can be added to our standard units with no other modifications. When installed in a heavy oil mist environment, an oil catch tray is incorporated into the unit.

Additional pricing per unit	
Filters only – 3000 / 4500 Units	\$800
Collection tray and unit mod	\$150
