

Washable Pre-Filter

ACTIVE FILTRATION line of filtration equipment

a product by Elite Manufacturing Specialists

Active Filtration units can be adapted with a electrostatic washable pre-filter that can be used repeatedly in shops with a simple process of washing the filter. The reusability of the filters make it ideal for the shop with constant large particles like saw dust.

The Washable Pre-filter provides a filtration level of MERV 6, while the primary bag filter will continue to filter to a MERV 15 rating. The pre-filter has a lower MERV rating, and thus the bag filter will get dirtier quicker.

Additional pricing per unit	
3000E / 4500E Unit	\$150
2000E Unit	\$75
